

DENTRIX® Image 4.0

DENTRIX Image 4.0 **The All-New, Fully-Loaded Imaging Suite**

The best digital imaging software product in the dental market just got better! Three groups of Dentrix engineers and developers have coordinated efforts to produce an upgrade to DENTRIX Image, the seamlessly integrated image management module for DENTRIX. This new and exciting version will be ready to ship to new users by year-end and the upgrade will be available to existing users shortly after that.

There is no doubt that DENTRIX Image 4.0 focuses on the image. The current version is packed with image manipulation features, from contrast and brightness adjustments to embossing and colorization. This foundation provides a return on investment and a boost in productivity. Image 4.0 takes it to the next level with the following new features:

DICOM Compliant

As mentioned before, this upgrade is all about the image. It starts with making the image more transportable, or DICOM com-

pliant. The Digital Imaging and Communications in Medicine (DICOM) standard was created by the National Electrical Manufacturers Association with the objective to develop a set of protocols that

enable a piece of equipment or software produced by one manufacturer to communicate with software or equipment produced by another. The end result is you can easily share images with a specialist regardless of what imaging software system the specialist uses (as long as their software is DICOM compliant). DENTRIX Image participated in a special DICOM educational exhibit on display at the American Dental Association's annual session held in October of this year.

New X-Ray Efficiencies

This latest version has simplified the process of capturing x-ray images with a digital x-ray sensor, like the DENTRIX ImageRAY. It's much easier to navigate.

Additionally, contrast, opacity, brightness and other filters can be applied to the image in real-time. If you want to attach an image to an electronic claim, you can retrieve as many as required directly from a complete series. Are you a ScanX fan? You'll love the way DENTRIX Image 4.0 allows you to view images as they are progressively scanned.

SQL Database

The SQL Database has been optimized to run more efficiently in Image 4.0. "The database is faster," said Brian Peterson, high-tech sales manager at Dentrix Dental Systems. "We listened to our customers. We burned a lot of midnight oil. We came through by putting more horsepower under the hood."

The Key to Eliminating Keys

Another key feature in DENTRIX Image 4.0 eliminates keys. Only one key is required to run the system. Simply plug a key into the server. You have to admire simplicity, and this upgrade delivers a lot of it.

Getting version 4.0

Current DENTRIX Image customers subscribed to the "OneSource Customer Service Plan" will receive the upgrade automatically without charge, although a shipping and handling fee may be applied. Those customers not on this plan will be able to purchase the upgrade, of course. And a special bonus for customers on the Classic Customer Service Plan; they can purchase the upgrade at a preferred customer discount. Call for Details.

Don't put off adding imaging capabilities to your practice, you can see DENTRIX Image in the comfort of your own practice by calling: 1-800-DENTRIX or by speaking to your local Dentrix independent representative. Remember the single biggest advantage of DENTRIX Image over any other imaging system is seamless integration. You can attach any image directly to the patient's chart, which saves incredible amounts of time by streamlining processes and improving efficiencies. Call now to see an office demonstration.
